

## FHIR Layer EXchange Release Notes

Released Date 1/27/22

Version 2.2

### *New with this Release*

#### **App Owner Portal**

- The Support page was enhanced to show vendors status of each support issue they have submitted and a history of all submitted tickets.
- Enhanced communication via the ability to reply to comments and create threads when communicating back and forth with support/administration.
- Applications that have been issued client credentials will now be tracked for inactivity and automated emails will be delivered if application has been inactive for 90days.
- Application owners can now specify up to 3 additional contacts to received email notifications regarding application and emails regarding new bulletin board or dashboard postings.
- Bulletin board and dashboard banner email notification now include content that was posted.
- Email templates have been enhanced to provide additional details based on vendor feedback.
- Inactivity logout modal now include timer countdown to auto log out.
- Enhancements were made to the application registration form to aide users in understanding validation rules.

#### **Patient Access APIs**

- The US Core Encounter resource has been enhanced to include the .contained Organization resource that was not provided when the Encounter resource was originally released in compliance with USCDI 2.0.
- The US Core Observation resource was enhanced to allow for filtering on multiple IDs for lab results and vital signs.
- The US Core Immunization resource was enhanced to allow for filtering on multiple IDs.

### *Bug Fixes*

- An issue was identified with the \_lastUpdated date on the US Core/CARIN BB resources when the source system data does not populate the claimAdjustedDate and claimAdjudicatedDate which caused 500 errors. This issue was resolved by not providing the \_lastUpdated date when the source system does not populate the claimAdjustedDate and claimAdjudicatedDate attributes.

*Known Issue*

- No known issues in this release
