

## FHIR Layer EXchange (FLEX) Release Notes

Release #: 3.3.0

Release Date: 5/23/23

---

### What's New with this Release

#### A. Access Management

##### 1. Admin Portal

- a. No new enhancement this release

##### 2. Vendor Portal

- a. Vendors will be able to add multiple redirect URIs while registering the application. Screenshot given below.

Redirect URI \* <http://www.example.com>

Add

<https://www.fitbit.com/global/usa/home>

<https://www.apple.com/store/test/home>

<https://doctorondemand.com/test/home>

<https://stage-virtualcare.optum.com/ovcp-visit/accounts>

##### 3. Member Portal

- a. No new enhancement this release

#### **4. Authorization/Authentication**

- a. Enhanced code to allow for targeting specific testing scenarios.
- b. As per RFC, refresh token should not be issued for a Client Credentials token. So, FLEX Team has removed it accordingly.
- c. Framework update and Security related updates

### **B. Framework**

#### **1. FLEX Server**

- a. Enhanced well-known/smart-configuration endpoint to add additional recommended values
- b. Fixed cases where searchRevInclude were included in the Capability Statement of FHIR resources that did not support RevInclude
- c. Enhanced Resiliency code to better support cases of 404
- d. Framework update and Security related updates

### **C. Patient Access APIs**

#### **1. Claims**

- a. No new enhancement this release

#### **2. Clinical**

- a. Observations with backslash in the value String attribute were causing failures. FLEX made a modification to handle the backslash causing the failure.

#### **3. Formulary (Plan/Member)**

- a. No new enhancement this release

### **D. Public Directory APIs**

#### **1. Provider Directory**

- a. No new enhancement this release

#### **2. Pharmacy Directory**

- a. No new enhancement this release

### 3. Formulary Directory

- a. No new enhancement this release

## Defect Fixes in this Release

1. **Admin Porta:** Application Screen Filter by API type for the Apps has been enhanced and the previous issues (Filter was not working when the API type selected as “Patient Access”) were resolved.
2. Security updates and vulnerability fixes to portals

## Known Issues in this Release

1. Vendors/App Owners: Will not receive an email after the organization attestation is past due. Vendor will receive all other emails as is. The issue is expected to be fixed in the upcoming release.
3. DE689972 | UHC Formulary Directory API Coverage Plan Resource when requested, it responds with Response Code of HTTP 404 (Not found). Flex fixed code to send a unique identifier to Source system to get IMDM\_EID. Before the source system was sent in plain text, now it will be sent as non-human readable value to hide PHI data.
4. PRB1394431 | DE705545 | Provider Directory Practitioner and PractitionerRole Resources when requested responds with a Response Code of HTTP 503 (Service Unavailable). Working with source system P360 on why is it happening
5. DE692806 | Provider Directory | PractitionerRole | Specialty Parameter | Read by ID issue (DE692806 Moved to July)
